Environmental Policy

It is Air Control Australia's policy to comply with all Local, State and Federal legislation requirements concerning the environment and with procedures agreed to with our customers. Air Control Australia provides a wide range of air conditioning, heating, ventilation and building management control services to building owners and managers, business owners and commercial applications alike. Among these services include preventative maintenance, emergency breakdown service, repairs, refurbishments, alterations, additions to plant and equipment and new building control systems.

The management and staff at Air Control Australia are committed to environmental improvement and preventing pollution. We strive for continuous improvement through regular review of environmental objectives and targets relating to waste reduction, energy efficiency, pollution safeguard and compliance with government authorities and environmental legislation.

Within our own operations we;

- Require employees to comply with all applicable environmental laws, regulations and standards.
- Identify and manage environmental risks within our own operations associated with the prevention of pollution.
- Communicate and make available this policy to all staff including management, employees and sub contractors.
- Continually improve the performance through training, management review, research and development and consultation with the community.
